PROGRAM 2: Streamlit Application for Text Summarization

AIM

To develop a Streamlit application for text summarization using a pretrained language model.

ALGORITHM

1. Import the required libraries.
2. Load a pretrained summarization model.
3. Accept lengthy text.
4. Generate a summary.
5. Display the summary.

CODE

```
import streamlit as st
from transformers import pipeline

st.title("Text Summarization Application")

summarizer = pipeline(
    "summarization",
    model="sshleifer/distilbart-cnn-12-6"
)

text = st.text_area("Enter your document:")

if st.button("Summarize"):

    if text:
        result = summarizer(
            text,
            max_length=80,
            min_length=20,
            do_sample=False,
```

```
            truncation=True
        )

        st.write(result[0]["summary_text"])
    else:
        st.warning("Please enter some text.")
```

INPUT

Artificial Intelligence enables machines to perform tasks that normally require human intelligence. Machine Learning allows computers to learn from data. Deep Learning uses neural networks to solve complex problems.

OUTPUT

A short summary of the given text is displayed.

RESULT

Thus, a text-summarization application was developed using a pretrained language model.
