PROGRAM 5: Text Generation Using a Local Pretrained Language Model

AIM

To demonstrate text generation using a pretrained language model through Python.

ALGORITHM

1. Import the Transformers library.
2. Load a pretrained GPT-2 model.
3. Accept a text prompt.
4. Generate additional text.
5. Display the output.

CODE

```
from transformers import pipeline

generator = pipeline(
    "text-generation",
    model="distilgpt2"
)

prompt = input("Enter a topic: ")

result = generator(
    prompt,
    max_new_tokens=50,
    do_sample=True,
    pad_token_id=50256
)

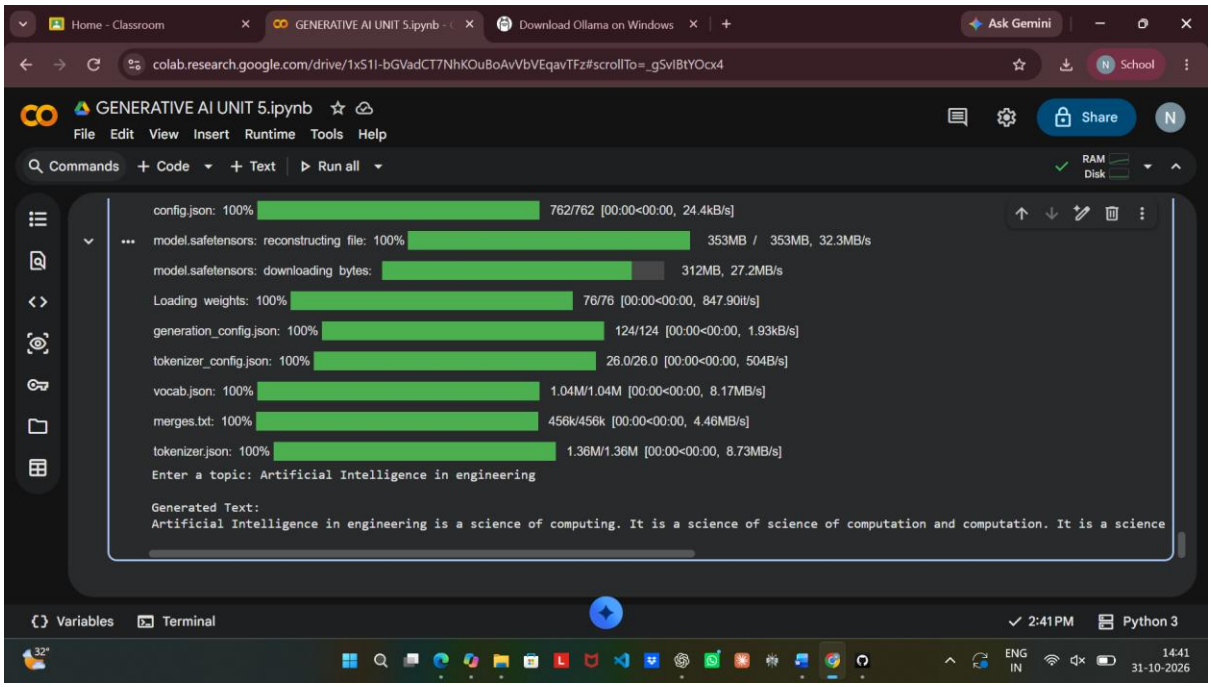

print("\nGenerated Text:")
print(result[0]["generated_text"])
```

INPUT

Enter a topic: Artificial Intelligence in engineering

OUTPUT

The model generates a continuation of the given topic.

RESULT

Thus, text generation was demonstrated using a pretrained language model.
