PROGRAM 2: Engineering Technical Support Chatbot

AIM

To develop a technical support chatbot that answers engineering-related technical questions using NLP.

ALGORITHM

1. Import the Transformers library.
2. Load a pretrained FLAN-T5 model.
3. Accept a technical question from the user.
4. Generate a technical response.
5. Display the answer.

CODE

```
from transformers import pipeline

model = pipeline(
    "text2text-generation",
    model="google/flan-t5-small"
)

question = input("Enter your technical question: ")

prompt = (
    "Explain the following engineering technical question "
    "in simple words with an example: " + question
)

response = model(prompt, max_new_tokens=120)

print("\nTechnical Support Response:")
print(response[0]["generated_text"])
```

INPUT

Enter your technical question:

What is cloud computing?

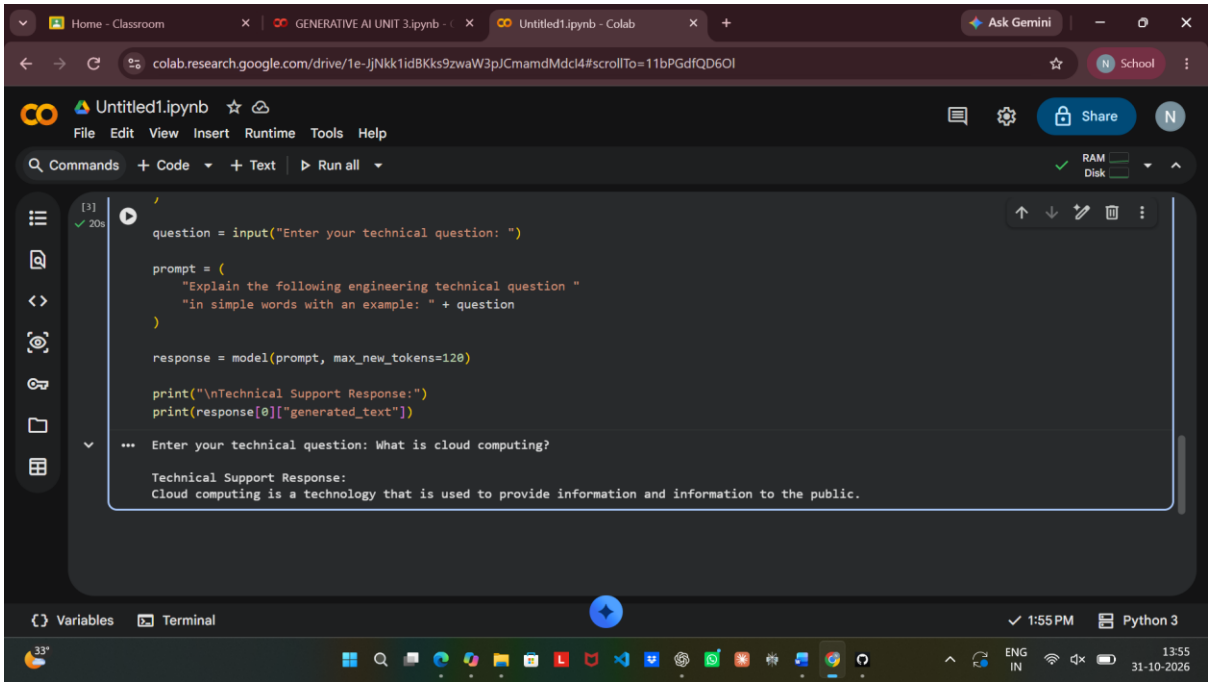

OUTPUT

Technical Support Response:

Cloud computing is the delivery of computing services

such as storage, servers and software over the internet.

For example, Google Drive provides cloud storage.

RESULT

Thus, an engineering technical support chatbot was developed using NLP and a pretrained language model.
