# PROGRAM 8: English-to-Indian Language Translation

**AIM**

To translate an engineering document from English into an Indian language using a pretrained translation model.

**ALGORITHM**

1. Import the required library.
2. Load a pretrained English-to-Hindi translation model.
3. Accept English text.
4. Translate the text into Hindi.
5. Display the translated output.

**CODE**

```
from transformers import pipeline

translator = pipeline(
    "translation",
    model="Helsinki-NLP/opus-mt-en-hi"
)

text = input("Enter English text: ")

translation = translator(text, max_length=200)

print("\nHindi Translation:")
print(translation[0]["translation_text"])
```

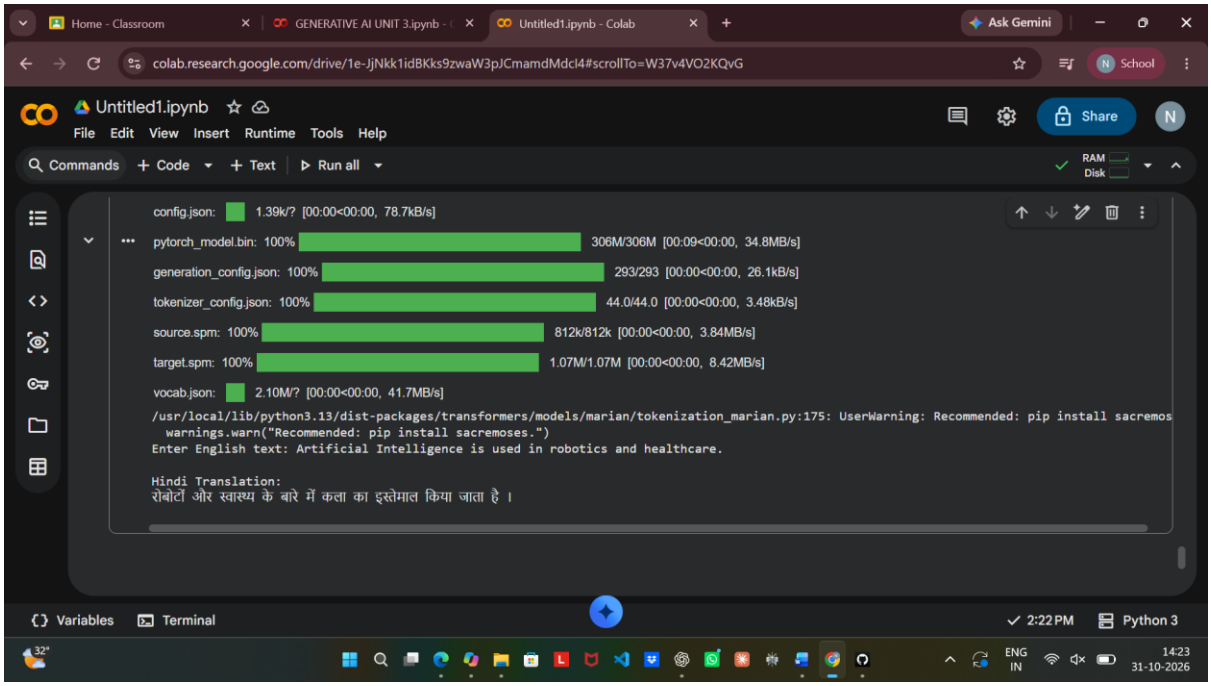

**INPUT**

Enter English text:

Artificial Intelligence is used in robotics and healthcare.

**OUTPUT**

The corresponding Hindi translation is displayed.

**RESULT**

Thus, an engineering-related English text was successfully translated into Hindi using a pretrained translation model.
